COBATEST Annual Meeting May 2018

COBATEST Network 2017

- 36 members in 16 countries
- 22 members using the COBATEST data collection tool
- New website and updated data collection tool

- Countries' legal context

- Lack of resources

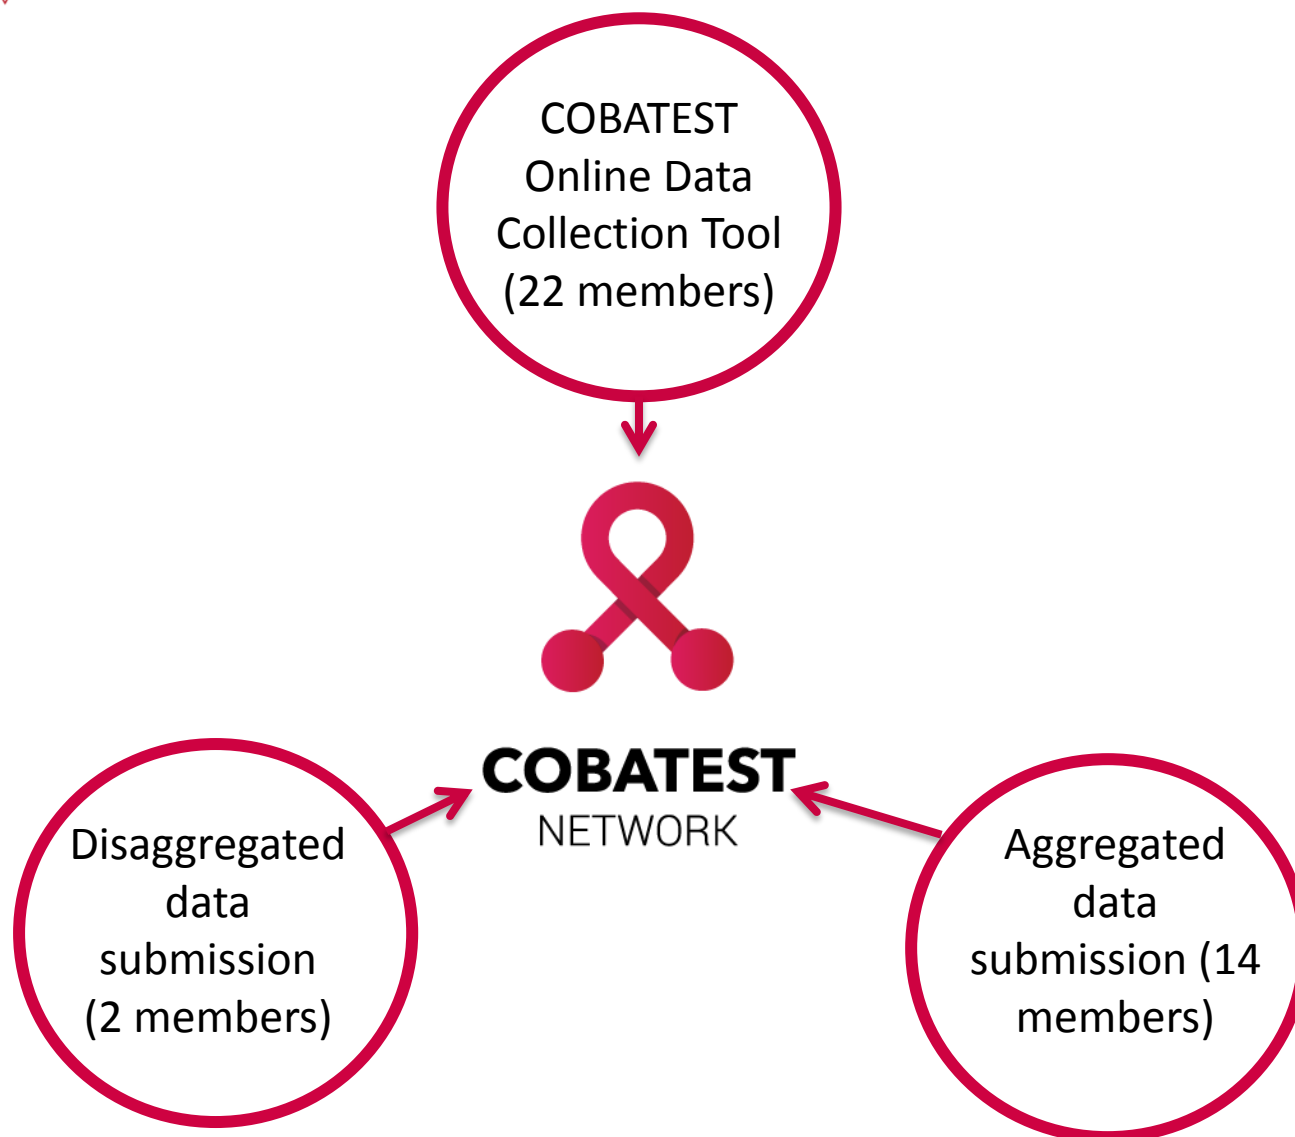

- Conflicting data collection requirements

- New members beginning to integrate COBATEST data collection requirements

Barriers to Data Collection

Data Collection - Methods

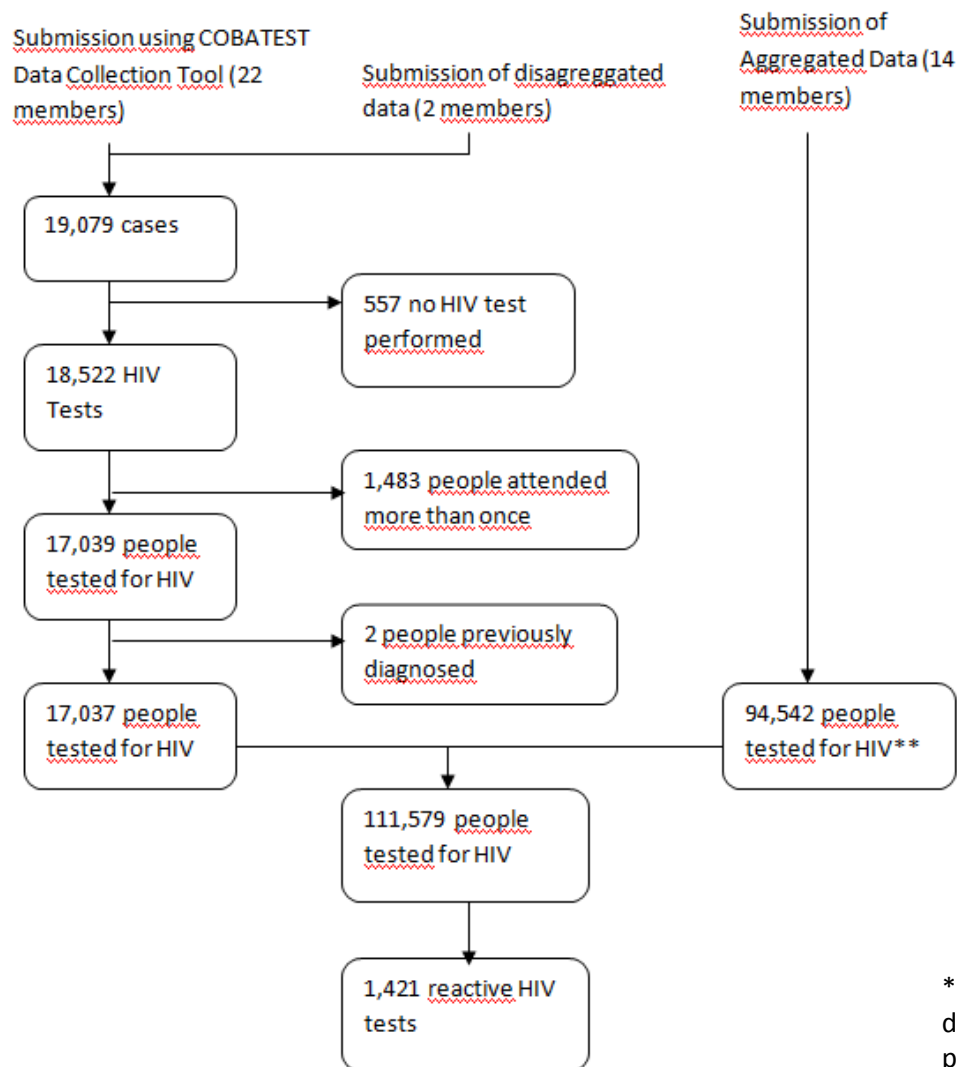

Data

- Only include
(HIV/HCV/Sy)

- Only include people who had a test (HIV/HCV/Syphilis)
- In the case that a person attends more than once consider their most recent consultation
- Exclude people previously diagnosed (unless linked to healthcare in their country by CBVCT)
- Count persons tested as far as possible (three members only submit data on number of tests)

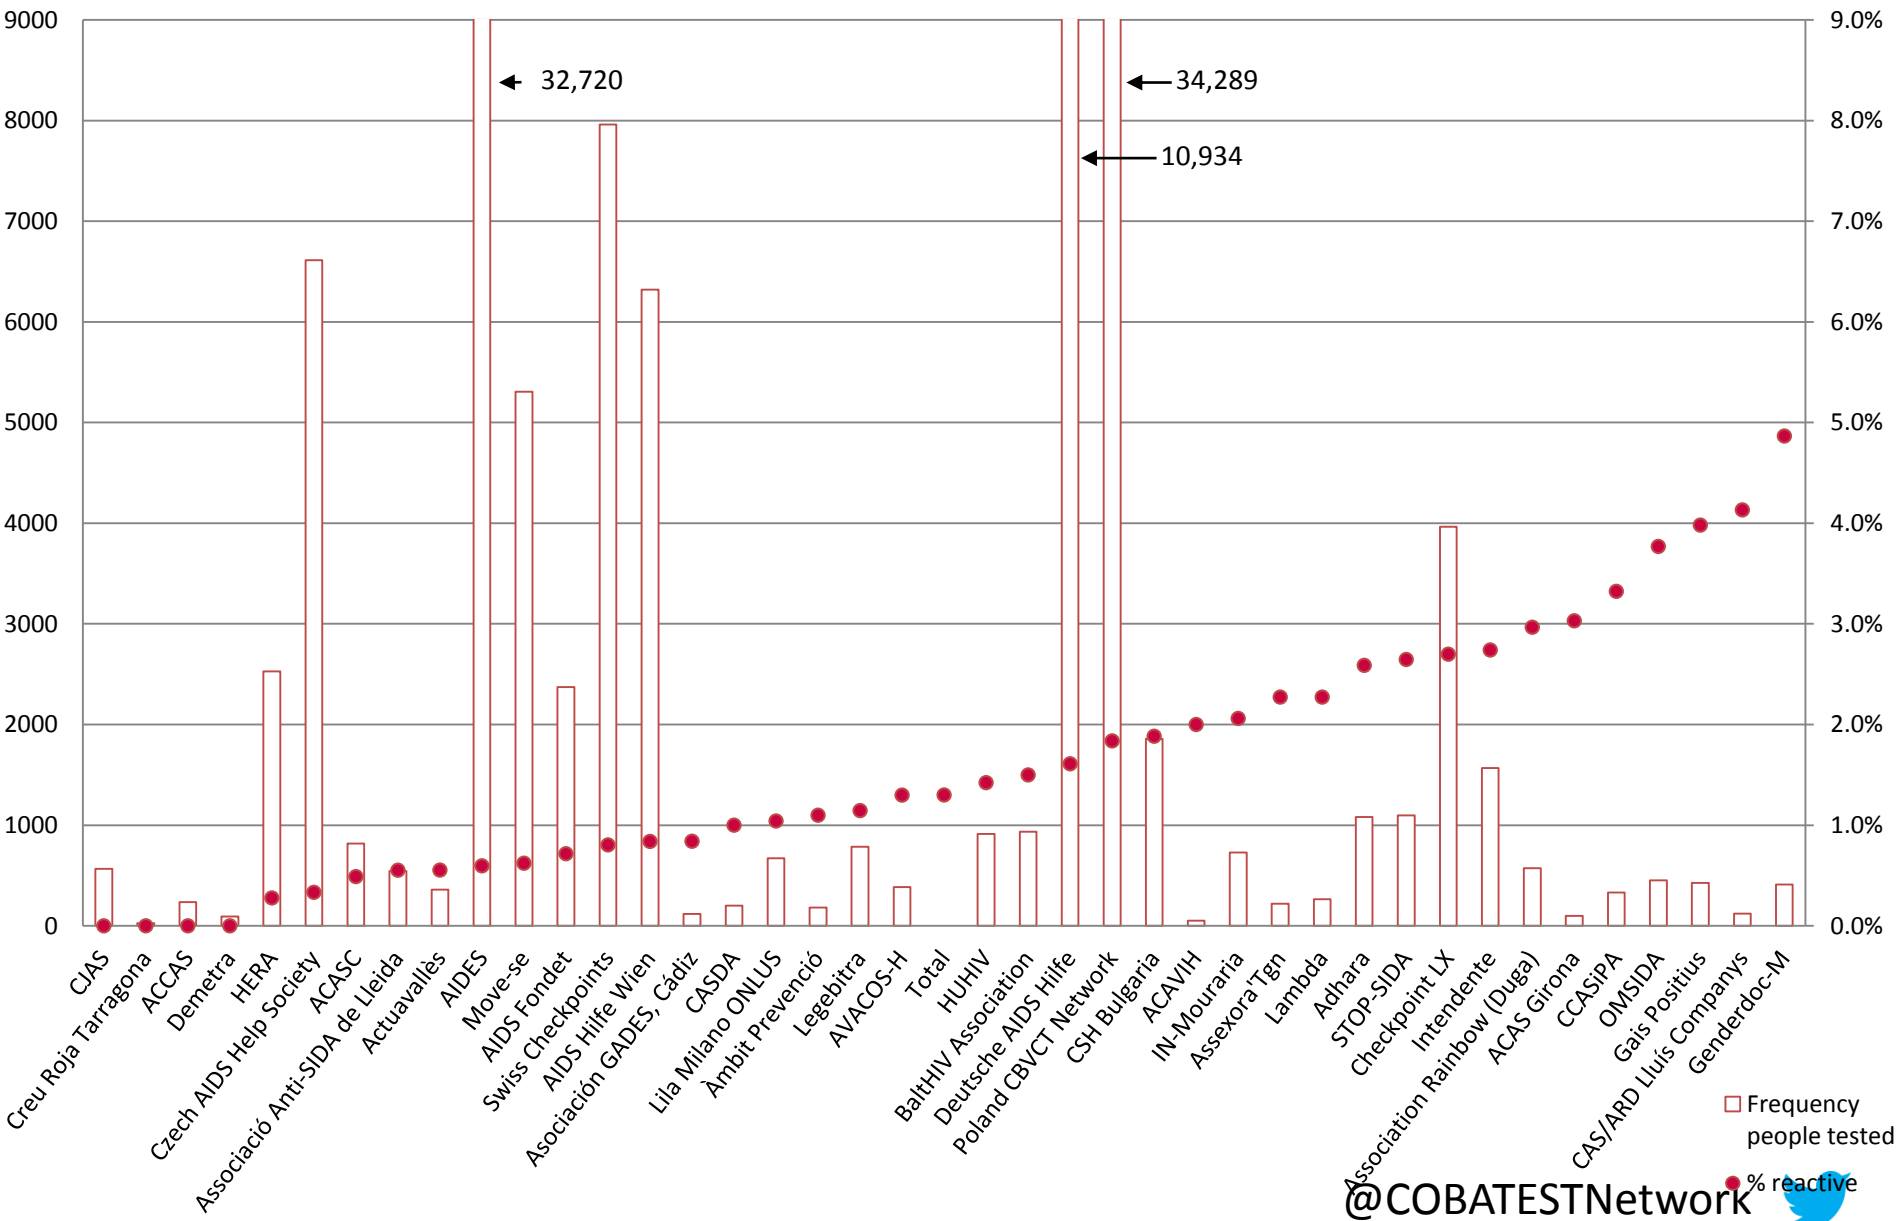

Data Collection - Methods

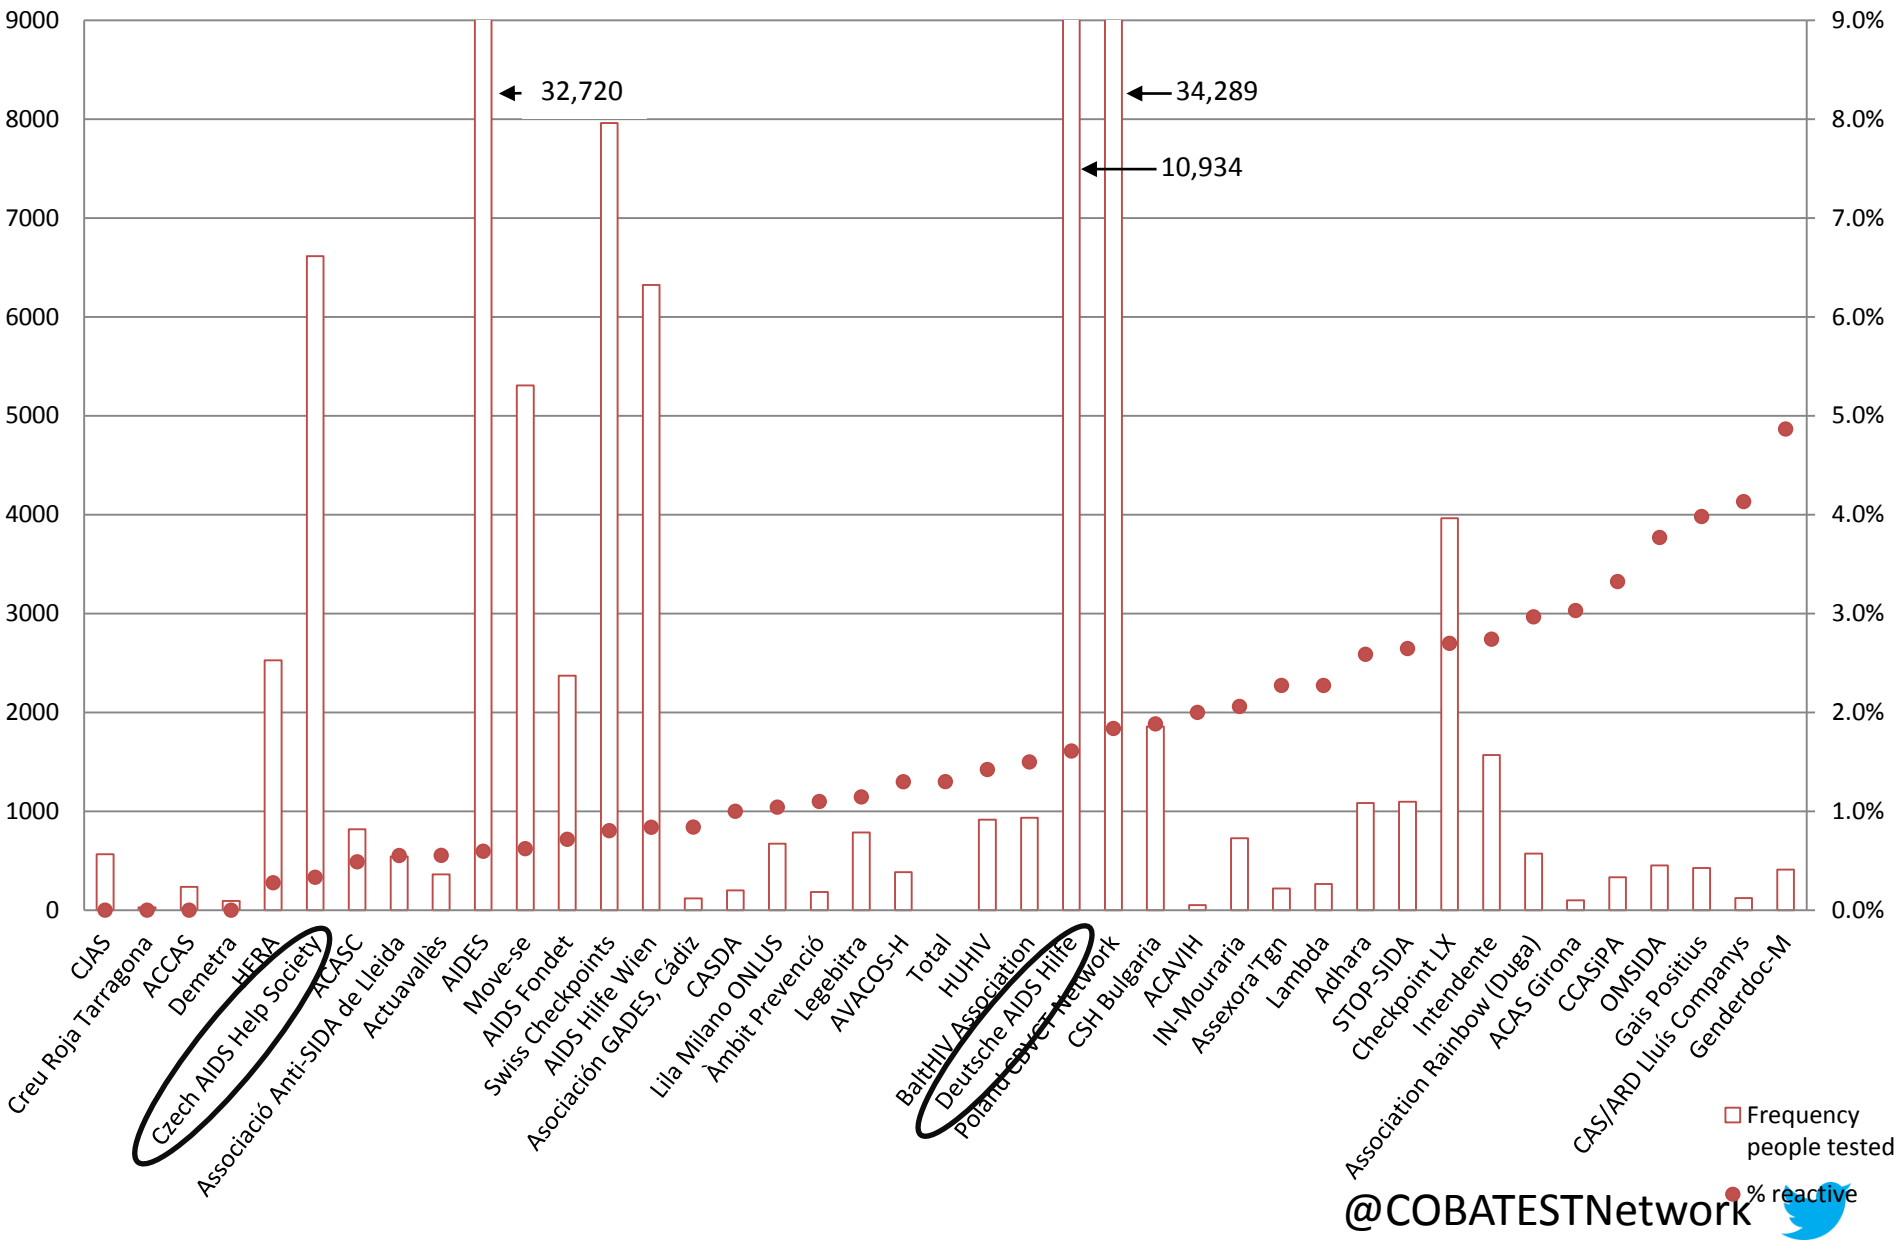

**Three centres submitted data on tests performed, not people tested

Recommendations

- Implementation of recommendations in “Quality of HIV Testing Data” report should be implemented
- National surveillance systems should take advantage of this source of data
- Data collection of transgender clients and HCV/syphilis/other testing should be improved
- Evaluation of how to better incorporate services that do not use unique identifiers
